

## Press release

### Impact Sign of APONE project on Duck & Chicken Vaccination

DEW organized Training on Vaccination of Chicken and Duck at Haluaghat upazilla of Mymensingh under its APONE project supported by Traidcraft Exchange. Training and vaccination was conducted by Veterinary Surgeon, Upazilla Livestock Office, Haluaghat, Mymensingh. Total trained groups of APONE was 37 and 1097 number of beneficiaries were trained up. After training on vaccination, veterinary surgeon started vaccination. He completed 17 nos groups chicken and duck vaccination up to 13<sup>th</sup> July, 2013. Rest of the group vaccination will start very soon. Usually farmers do not apply vaccine to chickens and Ducks. For this reasons, chickens and ducks die of disease. As a result, they get less profit. This training will help them to get more profit. Each group gets three vaccine- Duck plague (40tk) +RBD for above 2 month chicken (20tk) +BCRDB for below 2 month chicken (20tk).

Direct benefit was that each group gets benefit (TK) = 40+20+20=80 TK (vaccine) and 37 groups get benefit= 80\*37=2960 TK (vaccine). Indirect benefit was that each group total vaccinated chickens & Ducks = 100(chicks) +100(chicken) +100(Ducks) =300. If 10% loss, Total vaccinated chickens & Ducks=300-(300\*10%) =270. Let, get profit from each chickens & Ducks=50 TK. Total profit from each group=270\*50=13500 TK. Then, 37 groups will get profit= 13500\*37=499500 TK (Approximately).
